

Using Product Groups to Restrict Sales

This script also allows you to restrict the supply of particular groups of products to only certain customers. Once you have assigned a group to a customer, you will only be able to supply that customer with products from the defined group(s)

To put products in groups

- Fill out the “category1” field for each product with the group name for that product.

To assign a group to a customer

- Highlight the customer in the list
- Click the **Add group** button in the toolbar
- Fill in the group name in the window that appears.
- Click **OK**

To Remove a group from a customer

- Follow the steps above to add a group.
- If the group is already assigned to a customer you will be shown an alert window.
- Check the “Remove this product group” checkbox
- Click **OK**
