Using special prices

- There is nothing special you have to do. When entering a sales order or invoice, when you select a combination of customer and product that has special pricing, that pricing will be used. See the previous report example: customer "BSUPP" has a price of \$20 for the product BA100. The price is inserted automatically.

Important Caveats

If you change the product or name code of an item, the special pricing information will be lost. You will have to re-enter the information for any customer/item combinations that are affected.

Technical information

This script uses Moneyworks' user2 table to store information

Field	Data stored
Key	concatenated product code plus name code
Text	the special price(s) of the item along with the price breaks in format special_price;pricebreak1-specialprice1;pricebreak2-specialprice2;etc (Set to "-1" if the record is no longer needed)
