# SAF-T Export

To export your Moneyworks data in the SAF-T format that allows transfer to a different accounting system:

- Choose **Command > SAF-T Export** from the menu at the top of the screen
- A window will open asking you to confirm the country code (enter **DK** if in Denmark) and the start and end dates at which account balances will be exported (usually this will be the end of a financial year, or at least the end of a period)

- Clicking **OK** will show a standard operating system window where you can name the file and choose the export file's location
- The file will be created with a "txt" extension, but may be renamed with ".xml" depending on the requirements of the system you are importing data into
